Business Role Model

This is the metamodel for business Rules as is defined in D3.4 "Metamodel and Language for Service Modelling (UPMS), Extensions for Flexible Business Models and Service Variability – Interim Version" The example is not available, When the example will be able this document will be updated.

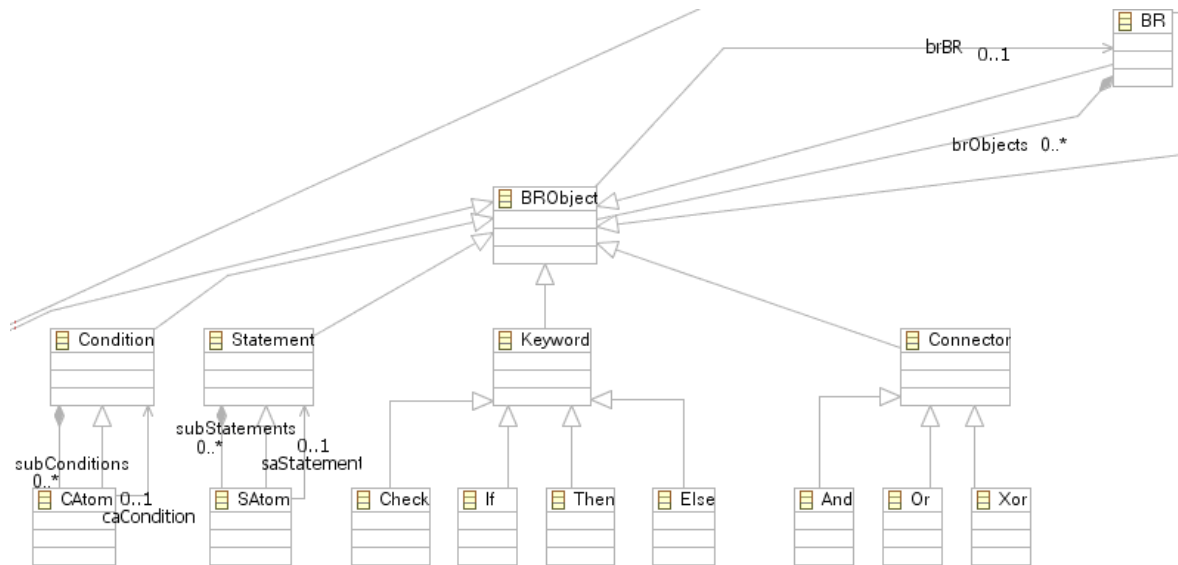

Figure 1 The Business Rules Metamodel

It is important to take into account that most of the views or models at CIM level are interconnected, so the process view includes the constructs from other three views with different functionalities, and the Business Rule view includes the elements from Data and Organisation view.
